FORENSIC SCIENCE MADE SIMPLE

School Visit Program

**With Biologist, Professor,
and Award-Winning Author**

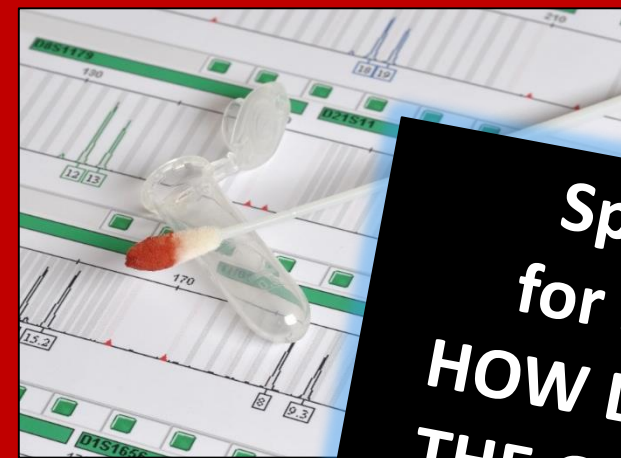

Dr. Grades 7-12 Ballard

Your students hear a lot these days about the power of forensic DNA to catch criminals and exonerate the innocent. But is DNA really the “magic bullet” portrayed by the media and on TV? How does this bold, exciting, powerful technology work, and where is it taking us? What’s it really like to be a criminalist and what’s the best path to get there?

I SHINE A (CRIME) LIGHT ON FORENSIC SCIENCE!

I’m an insider who’s been working in the field of forensic biology and DNA for more than 25 years, as a professor and as an expert consultant for the courts. I’ll excite your students about forensic science with my stories from the trenches, and challenge them to think critically about DNA’s power and perils. Forensic Science Made Simple is unlike any other school visit program! Your students will love it, and who knows? Some of them may be inspired to join the next generation of elite crime-solving scientists!

- **Classroom Visits and Assemblies**
- **Tailored for grades 7-12**
- **Next Generation Science Standards**
- **Reasonable Rates ! Book your visit today!**
